

1 - SQL SELECT ORDER BY

- The **ORDER BY** keyword is used to sort the result-set by one or more columns.
- The **ORDER BY** keyword sorts the records in ascending order by default or the keyword **ASC** can be used at the end.
- To sort the records in a descending order, you can use the **DESC**.

SELECT * FROM table_name

ORDER BY column_name **ASC | DESC**, column_name **ASC | DESC**;

Try it: SELECT * FROM city ORDER BY cityName ASC;

2 - SQL SELECT ORDER BY - Exercise

Write a SQL query to:

1. List the building with the address in descendant order.
 2. List the countries with the country name in ascendant order.
 3. List the apartments from the cheapest to the highest rent price.
 4. List the cities in United States with the population bigger than 10 000. You must display the most populated cities first.
