Matrix College
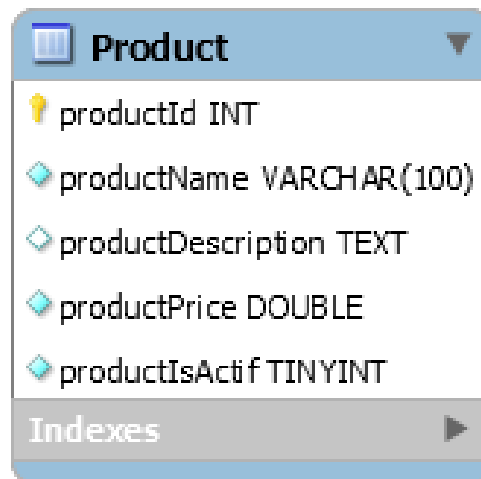

Final project - 30% - In pair

- Using workbench create the database below following the ER diagram.

Front End

- Name the database **with your name (one of the pair).**
- Create your database schema.
- Using the all goods techniques learned during the class create a nice HTML + CSS to be used on the following pages
    - Insert a new product (*product.php*)
    - List all products (*product-list.php*)
    - Edite a product (*produc-edit.php*)
    - Delete a product
- Create a menu to navigate thought the pages.
- P.S.: productIsActif is a Boolean: 0 = No , 1 = yes.

Back End

- Using PDO Class, create a connection file. Name it *connex.php*
- Create a php file to insert the data from the form into the database. Name it *product-create.php*.
- Create a php file to update the data. Name it *product-update.php*.
- Create a php file to delete the data. Name it *product-destroy.php*.

Present your project to the teacher before the final lesson (one hour before the final exam).

Compress the project in ZIP format and upload it to your Matrix Omnivox account (**one copy per pair** - **identify the names of both students** on the header of the page)
